

POWER UNIT

HP 50-1 POWER UNIT

The HP50-1 is a compact power unit designed to serve one static eliminator.

The HP50-1 produces high voltage, low current in a controlled and safe way to provide the power for Fraser AC High Performance static eliminators working on 5.5kV and 6kV.

- > Compact size makes it especially suitable for small machines.
- > The flat wave form of the high voltage combines high performance with low stress for long term reliability.
- > On-off switch is standard.
- > Stainless steel bayonet connectors for fast and easy connection of static eliminators.

Specification

Construction:	Powder coated steel case. Transformer with fully encapsulated windings.
Output:	6kV. Current limited to 4mA max.
Input:	Please specify input voltage and frequency. 115V 50 or 60Hz, 0.2A, or 230V 50 or 60Hz, 0.1A. IEC 320 Socket with 2m cable.
Maximum Load:	10m of combined Bar and HT cable.
Standards	2004/108/CE (EMC Directive). 2006/95/CE (Low Voltage Directive).
Environment:	50° maximum temperature. 70% rH non-condensing max.
Safety:	The HP50-1 is current limited to 4mA. If more than 4mA current is drawn the transformer will shut down. Power will restart when the excessive load or fault is removed.
